Routine System Management (RSM) for DLS 5 v1.40

PowerSeries Neo's Routine System Management is a revolutionary remote inspection tool leveraging comprehensive diagnostic data to reduce operating costs by dramatically reducing the number of truck rolls required for diagnostics and maintenance of the security system. Each remote inspection generates an RSM report with a summary of the security system status, historical events, user patterns and hardware diagnostic data.

Using a simple yet highly efficient workflow process which encompasses steps such as Automatic Connection, Data Collection, Evaluation and Resolution, RSM removes, wherever possible, the need for site visits.
