Kantech

KT-4 Door Controller

4-Door controller for seamless access control

Optional Wi-Fi or POE++ Connectivity

Enjoy flexible connectivity options with either Wi-Fi or Power over Ethernet (POE++), ensuring seamless integration into your existing network infrastructure for effortless management.

End-to-end Encryption

With Kantech's ioSmart reader and smart card, rest assured that your data remains secure with industry-leading end-to-end encryption, safeguarding your facility against unauthorized access.

Configurable Modes

Whether you require advanced access control capabilities with our EntraPass Security Management Software or basic door security in Standalone Mode, the KT-4 adapts to your specific needs with ease and efficiency.

Offline Mode

Experience uninterrupted access control even in offline scenarios, with the ability to store up to 100,000 cards and 60,000 events locally, ensuring operational continuity and peace of mind.

Double and Triple Swipe Functionality

Enhance operational efficiency and security protocols with the KT-4's double and triple swipe feature, enabling quick activation of relays, arming of alarm systems, and seamless door lock/unlock operations.

Expandability

Expand your door count with existing versions of EntraPass since the KT-4 is interchangeable with versions supporting the KT-400. Features vary by EntraPass version.
